W. H. Hatch, Sup't Schools Council Bluffs, Iowa.
Aschenbach & Miller, Philadelphia, Pa.
Henry Welch, Importer and Jobber, New York.
Mayer Bros., Importers, New York.

We have a great number of letters from additional parties endorsing the Electric Pen and Press, which space will not permit us to publish.

THE WOODBURY HOLDER.

The Woodbury Holder keeps the Electric Pen in a vertical position, which is best adapted to produce good work. The weight of the Electric Pen rests upon the point of the tube and the small leg which projects to the right of the holder. The handle, which is held by the hand, corresponds exactly to that of an ordinary pen holder. It should be held firmly, but not so as to cramp the fingers or prevent freedom of motion.

Only a slight downward pressure is necessary. The jar resulting from the rapid motion of the Pen is not felt by the hand.

The holder is much liked, especially by those who are not expert with the Electric Pen, as it enables any one to write in their natural handwriting, without practice. The attachment can be applied to any Electric Pen.

The price of the Woodbury Holder, complete, with short tube and needle shank, is - - - \$5.00

REED PEN.

An extremely rapid form of the Electric Pen, called the "Reed Pen," has been devised by Mr. Edison. It is not recommended, except to very fast, skillful penmen, as the speed of the pen is so great that the centres of letters are liable to cut out. The price of the Reed or Fast Pen alone is \$25.00, the same as an ordinary Electric Pen.

MUSIC RULING PEN.

This is an Electric Pen having five needles, for the purpose of Ruling Music. The stencil paper is placed on thick, firm cloth, or the edges of paper, when the ruling pen is used. Two batteries are required to do good work.

The price of the Ruling Pen, complete, is \$30.00, or the ruling attachment can be applied to any Electric Pen, price \$5.00.
